Sleep Mechanisms and Functions
in humans and animals — an evolutionary perspective

Edited by
Andrew Mayes

Department of Psychology
Manchester University
Contents

Preface v

1 Theories in Modern Sleep Research 1
Wilse B. Webb, Department of Psychology, University of Florida
1.1 Contemporary sleep research 1
1.2 Theories of dream 6
1.3 Theories of sleep 7
1.4 Restorative theories 8
1.5 Behavioural theories 10
1.6 Comparison of theories 12
1.7 Conclusion 15

2 The Rhythmical Nature of Sleep 18
Kenneth I. Hume, Department of Biological Sciences, Manchester Polytechnic
2.1 Introduction 18
2.2 Principles and methods of rhythm research 19
2.3 Sleep and rhythm research 22
2.4 Rhythmical aspects of nocturnal sleep 23
2.5 Sleep during abnormal bedrest–activity schedules 27
2.6 Sleep–wakefulness, temperature and hormonal rhythms, pathology and mechanisms 42
2.7 Review and functional implications 47

3 The Evolution of Sleep 57
Ray Meddis, Department of Psychology, Loughborough University
3.1 Introduction 57
3.2 Evolutionary origin of sleep 59
3.3 Evolution of active and quiet sleep states 61
3.4 The similarity of avian and mammalian sleep 63
3.5 The reptilian heritage 65
3.6 AS and homeothermy 68
3.7 AS and ontogeny 69
3.8 Evaluation of specific sleep adaptations in mammals 71
3.9 Statistical analysis of comparative sleep data 72
3.10 Conclusions 92
Bibliography of Animal Sleep Studies 96

4 Infant Sleep Development 107
Ronald M. Harper, Zehava Frostig and David Taube, Department of Anatomy and the Brain Research Institute, UCLA
4.1 Introduction 107
4.2 Physiological changes during sleep development 108
4.3 State periodicity 114
4.4 Time of night effects 122
4.5 Summary 122

5 A Life Span Perspective on Sleep 126
Harold Zepelin, Department of Psychology, Oakland University
5.1 Maturation of sleep 126
5.2 Senescent change in human EEG stages 131
5.3 Daily sleep quotas 136
5.4 Sleep disturbance 140
5.5 Sources of senescent change 142
5.6 Normal age-related changes 144
5.7 Theoretical implications 152
5.8 Summary 154

6 Cellular Mechanisms of Wakefulness and Slow Wave Sleep 161
Mircea Steriade, Faculté de Medicine, Université Laval, Quebec
6.1 Prolegomena to a cellular study of structures generating ascending activation processes 161
6.2 Input-output organization of systems hypothetically endowed with activating properties: the midbrain reticular core and related thalamic nuclei 180
6.3 Discharge properties of midbrain reticular neurons related to tonic activation processes 198
6.4 Some mechanisms of thalamocortical activation and deactivation processes related to waking and synchronized sleep 210

7 REM Sleep Control Mechanisms: Evidence from Lesion and Unit Recording Studies 217
J. M. Siegel, Medical Center, Veterans Administration Hospital, Sepulveda
7.1 General considerations 217
7.2 Lesion and transection studies 219
7.3 Unit recording studies 225
7.4 Conclusion 229

8 Pharmacological Approaches to Sleep Regulation 232
Alexander A. Borbély, Pharmakologisches Institut der Universität Zurich
8.1 Introduction 232
8.2 Hypnotics and sleep regulation: studies in man 234
8.3 Experimental pharmacology and sleep regulation: studies in animals 240
8.4 Outline of a two-process model and some pharmacological implications 251
8.5 Concluding remarks 255
8.6 Summary 256

9 Mammalian Sleep Function with Particular Reference to Man 262
J. A. Horne, Department of Psychology, Loughborough University
9.1 Introduction and summary of main proposals 262
9.2 Human sleep and body restitution 264
9.3 Brain restitution and sleep 273
9.4 Obligatory sleep 277
9.5 The functional significance of other REM sleep epiphenomena 289
9.6 Further aspects of mammalian sleep function 296

10 Cognitive Processes During Sleep: Evolutionary Aspects 313
David Foulkes, Georgia Mental Health Institute, Atlanta
10.1 Dreaming in the adult human: descriptive data 314
10.2 Dreaming in the adult human: functional considerations 315
10.3 Animal models of human REM dreaming 317
10.4 A human model of dream phylogeny 322
10.5 Subhumans as thinkers — and dreamers 325
10.6 Ontogeny again: consciousness 327
10.7 Human implications of the phylogenetic/ontogenetic review 331

11 Overview: Comments on General Themes and a Discussion of Sleep Pathology 338
Andrew Mayes, Department of Psychology, Manchester University
11.1 Introduction 338
11.2 Sleep pathologies — the new taxonomy 339
11.3 New techniques and mechanisms of sleep 343
11.4 Some comments on the possible functions of sleep 346
