PART I INTRODUCTION TO POWER SYSTEMS

1 Introduction 3
1.1 Stability and Control of a Dynamic System 3
1.2 Classification of Power System Dynamics 5
1.3 Two Pairs of Important Quantities:
    Reactive Power/Voltage and Real Power/Frequency 7
1.4 Stability of a Power System 9
1.5 Security of a Power System 9
1.6 Brief Historical Overview 12

2 Power System Components 15
2.1 Introduction 15
    2.1.1 Reliability of Supply 15
    2.1.2 Supplying Electrical Energy of Good Quality 16
    2.1.3 Economic Generation and Transmission 16
    2.1.4 Environmental Issues 16
2.2 Structure of the Electrical Power System 16
    2.2.1 Generation 18
    2.2.2 Transmission 18
    2.2.3 Distribution 19
    2.2.4 Demand 19
2.3 Generating Units 19
    2.3.1 Synchronous Generators 20
    2.3.2 Exciters and Automatic Voltage Regulators 21
    2.3.3 Turbines and their Governing Systems 25
2.4 Substations 35
2.5 Transmission and Distribution Network 35
    2.5.1 Overhead Lines and Underground Cables 35
    2.5.2 Transformers 36
    2.5.3 Shunt and Series Elements 41
    2.5.4 FACTS Devices 43
2.6 Protection
  2.6.1 Protection of Transmission Lines 54
  2.6.2 Protection of Transformers 56
  2.6.3 Protection of Busbars 57
  2.6.4 Protection of Generating Units 57

2.7 Wide Area Measurement Systems 58
  2.7.1 WAMS and WAMPAC Based on GPS Signal 58
  2.7.2 Phasors 59
  2.7.3 Phasor Measurement Unit 61
  2.7.4 Structures of WAMS and WAMPAC 62

3 The Power System in the Steady State 65
3.1 Transmission Lines 65
  3.1.1 Line Equations and the π-Equivalent Circuit 66
  3.1.2 Performance of the Transmission Line 67
  3.1.3 Underground Cables 72
3.2 Transformers 72
  3.2.1 Equivalent Circuit 72
  3.2.2 Off-Nominal Transformation Ratio 74
3.3 Synchronous Generators 76
  3.3.1 Round-Rotor Machines 76
  3.3.2 Salient-Pole Machines 83
  3.3.3 Synchronous Generator as a Power Source 89
  3.3.4 Reactive Power Capability Curve of a Round-Rotor Generator 91
  3.3.5 Voltage–Reactive Power Capability Characteristic V(Q) 95
  3.3.6 Including the Equivalent Network Impedance 100
3.4 Power System Loads 104
  3.4.1 Lighting and Heating 105
  3.4.2 Induction Motors 106
  3.4.3 Static Characteristics of the Load 110
  3.4.4 Load Models 111
3.5 Network Equations 113
3.6 Power Flows in Transmission Networks 118
  3.6.1 Control of Power Flows 118
  3.6.2 Calculation of Power Flows 122

PART II INTRODUCTION TO POWER SYSTEM DYNAMICS

4 Electromagnetic Phenomena 127
4.1 Fundamentals 127
4.2 Three-Phase Short Circuit on a Synchronous Generator 129
  4.2.1 Three-Phase Short Circuit with the Generator on No Load and Winding
    Resistance Neglected 129
  4.2.2 Including the Effect of Winding Resistance 133
  4.2.3 Armature Flux Paths and the Equivalent Reactances 134
  4.2.4 Generator Electromotive Forces and Equivalent Circuits 140
  4.2.5 Short-Circuit Currents with the Generator Initially on No Load 146
  4.2.6 Short-Circuit Currents in the Loaded Generator 149
  4.2.7 Subtransient Torque 150
6.6 Out-of-Step Protection Systems
   6.6.1 Impedance Loci During Power Swings  244
   6.6.2 Power Swing Blocking  248
   6.6.3 Pole-Slip Protection of Synchronous Generator  249
   6.6.4 Out-of-Step Tripping in a Network  251
   6.6.5 Example of a Blackout  253
6.7 Torsional Oscillations in the Drive Shaft  253
   6.7.1 The Torsional Natural Frequencies of the Turbine–Generator Rotor  253
   6.7.2 Effect of System Faults  259
   6.7.3 Subsynchronous Resonance  261

7  Wind Power  265
7.1 Wind Turbines  265
   7.1.1 Generator Systems  269
7.2 Induction Machine Equivalent Circuit  274
7.3 Induction Generator Coupled to the Grid  277
7.4 Induction Generators with Slightly Increased Speed Range via External Rotor Resistance  280
7.5 Induction Generators with Significantly Increased Speed Range: DFIGs  282
   7.5.1 Operation with the Injected Voltage in Phase with the Rotor Current  284
   7.5.2 Operation with the Injected Voltage out of Phase with the Rotor Current  286
   7.5.3 The DFIG as a Synchronous Generator  287
   7.5.4 Control Strategy for a DFIG  289
7.6 Fully Rated Converter Systems: Wide Speed Control  290
   7.6.1 Machine-Side Inverter  291
   7.6.2 Grid-Side Inverter  292
7.7 Peak Power Tracking of Variable Speed Wind Turbines  293
7.8 Connections of Wind Farms  294
7.9 Fault Behaviour of Induction Generators  294
   7.9.1 Fixed-Speed Induction Generators  294
   7.9.2 Variable-Speed Induction Generators  296
7.10 Influence of Wind Generators on Power System Stability  296

8  Voltage Stability  299
8.1 Network Feasibility  299
   8.1.1 Ideally Stiff Load  300
   8.1.2 Influence of the Load Characteristics  303
8.2 Stability Criteria  305
   8.2.1 The $dQ/dV$ Criterion  305
   8.2.2 The $dE/dV$ Criterion  308
   8.2.3 The $dQ_G/dQ_L$ Criterion  309
8.3 Critical Load Demand and Voltage Collapse  310
   8.3.1 Effects of Increasing Demand  311
   8.3.2 Effect of Network Outages  314
   8.3.3 Influence of the Shape of the Load Characteristics  315
   8.3.4 Influence of the Voltage Control  317
8.4 Static Analysis  318
   8.4.1 Voltage Stability and Load Flow  318
   8.4.2 Voltage Stability Indices  320
## Contents

8.5 Dynamic Analysis
- 8.5.1 The Dynamics of Voltage Collapse 321
- 8.5.2 Examples of Power System Blackouts 323
- 8.5.3 Computer Simulation of Voltage Collapse 326

8.6 Prevention of Voltage Collapse 327

8.7 Self-Excitation of a Generator Operating on a Capacitive Load
- 8.7.1 Parametric Resonance in RLC Circuits 329
- 8.7.2 Self-Excitation of a Generator with Open-Circuited Field Winding 330
- 8.7.3 Self-Excitation of a Generator with Closed Field Winding 332
- 8.7.4 Practical Possibility of Self-Excitation 334

9 Frequency Stability and Control 335

9.1 Automatic Generation Control
- 9.1.1 Generation Characteristic 336
- 9.1.2 Primary Control 339
- 9.1.3 Secondary Control 341
- 9.1.4 Tertiary Control 345
- 9.1.5 AGC as a Multi-Level Control 346
- 9.1.6 Defence Plan Against Frequency Instability 347
- 9.1.7 Quality Assessment of Frequency Control 349

9.2 Stage I – Rotor Swings in the Generators 350

9.3 Stage II – Frequency Drop 353

9.4 Stage III – Primary Control
- 9.4.1 The Importance of the Spinning Reserve 356
- 9.4.2 Frequency Collapse 358
- 9.4.3 Underfrequency Load Shedding 360

9.5 Stage IV – Secondary Control
- 9.5.1 Islanded Systems 361
- 9.5.2 Interconnected Systems and Tie-Line Oscillations 364

9.6 FACTS Devices in Tie-Lines
- 9.6.1 Incremental Model of a Multi-Machine System 371
- 9.6.2 State-Variable Control Based on Lyapunov Method 375
- 9.6.3 Example of Simulation Results 378
- 9.6.4 Coordination Between AGC and Series FACTS Devices in Tie-Lines 379

10 Stability Enhancement 383

10.1 Power System Stabilizers
- 10.1.1 PSS Applied to the Excitation System 384
- 10.1.2 PSS Applied to the Turbine Governor 387

10.2 Fast Valving 387

10.3 Braking Resistors 391

10.4 Generator Tripping
- 10.4.1 Preventive Tripping 393
- 10.4.2 Restitutive Tripping 394

10.5 Shunt FACTS Devices
- 10.5.1 Power-Angle Characteristic 395
- 10.5.2 State-Variable Control 397
- 10.5.3 Control Based on Local Measurements 400
- 10.5.4 Examples of Controllable Shunt Elements 404
- 10.5.5 Generalization to Multi-Machine Systems 406
- 10.5.6 Example of Simulation Results 414
