## Part I Critical phenomena

1	Introduction to critical phenomena	3
1.1	The ferromagnetic transition	3
1.2	The Ising model	5
1.3	The mean field	12
1.4	Correlation functions	19
1.5	Qualitative description of critical phenomena	27
	Problems	31
	Further reading	38
2	Landau theory	39
2.1	The Ginzburg–Landau Hamiltonian and the Landau approximation	40
2.2	The Landau theory of phase transitions	48
2.3	Correlation functions	50
2.4	Critique of the Landau approximation, and the Ginzburg criterion	52
	Problems	59
	Further reading	66
3	The renormalization group	67
3.1	Basic concepts: blocks of spins, critical surface, and fixed points	69
3.2	Behaviour near a fixed point. Critical exponents	77
3.3	The Ising model on a triangular lattice, and the approximation by cumulants	86
3.4	The Gaussian model	90
3.5	Calculation of the critical exponents to order $\epsilon$	100
3.6	Marginal fields, the function $\beta(g)$ , and logarithmic corrections in $4D$	109
	Problems	116
	Further reading	125

<b>4 Two-dimensional models</b>	<b>126</b>
4.1 The $XY$ model: qualitative study	127
4.2 Renormalization-group analysis	133
4.3 Nonlinear $\sigma$ -models	140
Problems	145
Further reading	147
<b>Part II Perturbation theory and renormalization: the Euclidean scalar field</b>	
<b>5 The perturbation expansion and Feynman diagrams</b>	<b>151</b>
5.1 Wick's theorem and the generating functional	151
5.2 The perturbation expansion of $G^{(2)}$ and of $G^{(4)}$ : Feynman diagrams	157
5.3 Connected correlation functions and proper vertices	171
5.4 The effective potential: the loop expansion	179
5.5 The evaluation of Feynman diagrams	182
5.6 Power-counting: ultraviolet and infrared divergences	190
Problems	196
Further reading	201
<b>6 Renormalization</b>	<b>202</b>
6.1 Introduction	203
6.2 The renormalization of mass and coupling constant	206
6.3 Field renormalization: counterterms	209
6.4 The general case	214
6.5 Composite operators and their renormalization	220
6.6 The minimal subtraction scheme (MS)	225
Problems	229
Further reading	235
<b>7 The Callan–Symanzik equations</b>	<b>236</b>
7.1 The Callan–Symanzik equations at the critical temperature	238
7.2 The Callan–Symanzik equations for $T > T_c$	250
7.3 Renormalization and the renormalization group	256
7.4 The renormalization group in $D = 4$ dimensions	264

7.5 The renormalization group in dimensions $D < 4$	267
Problems	274
Further reading	279

## Part III The quantum theory of scalar fields

8 Path integrals in quantum and in statistical mechanics	283
8.1 Quantum spin and Ising model	286
8.2 Particle in a potential	291
8.3 Euclidean continuation, and comments	303
Problems	308
Further reading	312
9 Quantization of the Klein–Gordon field	313
9.1 The quantization of elastic vibrations	315
9.2 Quantization of the Klein–Gordon field	323
9.3 Coupling to a classical source, and Wick’s theorem	331
Problems	340
Further reading	345
10 Green’s functions and the $S$ matrix	346
10.1 Perturbation expansion of the Green’s functions	347
10.2 Path integrals and the Euclidean theory	355
10.3 Cross-sections and the $S$ -matrix	362
10.4 The unitarity of the $S$ -matrix	377
10.5 Generalizations	387
Problems	394
Further reading	397

## Part IV Gauge theories

11 Quantization of the Dirac field and of the electromagnetic field	401
11.1 Quantization of the Dirac field	402
11.2 Wick’s theorem for fermions	414
11.3 The Lagrangean formalism for the classical electromagnetic field	419

11.4	Quantization of the electromagnetic field	423
	Problems	431
	Further reading	435
12	Quantum electrodynamics	436
12.1	The Feynman rules for quantum electrodynamics	437
12.2	Applications	445
12.3	One-loop diagrams in electrodynamics	451
12.4	Ward identities, unitarity, and renormalization	469
	Problems	483
	Further reading	493
13	Non-Abelian gauge theories	494
13.1	Non-Abelian gauge fields: the classical theory	495
13.2	The quantization of non-Abelian gauge theories	506
13.3	The Glashow–Salam–Weinberg model of electroweak interactions	514
13.4	Quantum chromodynamics	530
13.5	Lattice gauge theories	544
	Problems	554
	Further reading	562

## Appendices

A	Fourier transforms and Gaussian integration	565
A.1	Fourier transforms	565
A.2	Gaussian integrals	567
A.3	Integrals in $D$ dimensions	569
B	Feynman integrals with dimensional regularization (Euclidean case)	571
C	Noether's theorem, conserved currents and Ward identities	573
C.1	Noether's theorem and conserved currents	573
C.2	Energy–momentum tensor	574
C.3	Ward identities	575

<b>D Formulary</b>	<b>577</b>
D.1 The Lorentz group	577
D.2 Dirac matrices	578
D.3 Cross-sections	580
D.4 Feynman rules	581
<b>References</b>	<b>585</b>
<b>Index</b>	<b>589</b>
