## CONTENTS

### PART 1: BASIC CONCEPTS

1. The Meaning of Structured Analysis  
   1.1 What is analysis?  
   1.2 Problems of analysis  
   1.3 The user-analyst relationship  
   1.4 What is Structured Analysis?  

2. Conduct of the analysis phase  
   2.1 The classical project life cycle  
   2.2 The modern life cycle  
   2.3 The effect of Structured Analysis on the life cycle  
   2.4 Procedures of Structured Analysis  
   2.5 Characteristics of the Structured Specification  
   2.6 Political effects of Structured Analysis  
   2.7 Questions and answers  

3. The Tools of Structured Analysis  
   3.1 A sample situation  
   3.2 A Data Flow Diagram example  
   3.3 A Data Dictionary example  
   3.4 A Structured English example  
   3.5 A Decision Table example  
   3.6 A Decision Tree example  

### PART 2: FUNCTIONAL DECOMPOSITION

4. Data Flow Diagrams  
   4.1 What is a Data Flow Diagram?  
   4.2 A Data Flow Diagram by any other name  
   4.3 DFD characteristics — inversion of viewpoint  

---

Page

1. The Meaning of Structured Analysis 3  
2. Conduct of the analysis phase 19  
3. The Tools of Structured Analysis 37  
4. Data Flow Diagrams 47
5. Data Flow Diagram conventions
  5.1 Data Flow Diagram elements
  5.2 Procedural annotation of DFD's
  5.3 The Lump Law

6. Guidelines for drawing Data Flow Diagrams
  6.1 Identifying net inputs and outputs
  6.2 Filling in the DFD body
  6.3 Labeling data flows
  6.4 Labeling processes
  6.5 Documenting the steady state
  6.6 Omitting trivial error-handling details
  6.7 Portraying data flow and not control flow
  6.8 Starting over

7. Leveled Data Flow Diagrams
  7.1 Top-down analysis — the concept of leveling
  7.2 Elements of a leveled DFD set
  7.3 Leveling conventions
  7.4 Bottom-level considerations
  7.5 Advantages of leveled Data Flow Diagrams
  7.6 Answers to the leveled DFD Guessing Game

8. A Case Study in Structured Analysis
  8.1 Background for the case study
  8.2 Welcome to the project — context of analysis
  8.3 The top level
  8.4 Intermezzo: What's going on here?
  8.5 The lower levels
  8.6 Summary
  8.7 Postscript

  9.1 Tests for correctness
  9.2 Tests for usefulness
  9.3 Starting over

  10.1 The man-machine dialogue
  10.2 The integrated top-level approach
  10.3 Problems and potential problems
PART 3: DATA DICTIONARY

11. The analysis phase Data Dictionary
   11.1 The uses of Data Dictionary  126
   11.2 Correlating Data Dictionary to the DFD's  127
   11.3 Implementation considerations  127

12. Definitions in the Data Dictionary  129
   12.1 Characteristics of a definition  129
   12.2 Definition conventions  133
   12.3 Redundancy in DD definitions  137
   12.4 Self-defining terms  139
   12.5 Treatment of aliases  142
   12.6 What's in a name?  143
   12.7 Sample entries by class  144

13. Logical Data Structures  149
   13.1 Data base considerations  150
   13.2 Data Structure Diagrams (DSD's)  152
   13.3 Uses of the Data Structure Diagram  155

14. Data Dictionary Implementation  157
   14.1 Automated Data Dictionary  157
   14.2 Manual Data Dictionary  162
   14.3 Hybrid Data Dictionary  162
   14.4 Librarian's role in Data Dictionary  163
   14.5 Questions about Data Dictionary  164

PART 4: PROCESS SPECIFICATION

15. Description of Primitives  169
   15.1 Specification goals  169
   15.2 Classical specification writing methods  177
   15.3 Alternative means of specification  177

16. Structured English  179
   16.1 Definition of Structured English  179
   16.2 An example  180
   16.3 The logical constructs of Structured English  184
   16.4 The vocabulary of Structured English  202
   16.5 Structured English styles  203
   16.6 The balance sheet on Structured English  210
   16.7 Gaining user acceptance  212
CONTENTS

17. Alternatives for Process Specification
   17.1 When to use a Decision Table
   17.2 Getting started
   17.3 Deriving the condition matrix
   17.4 Combining Decision Tables and Structured English
   17.5 Selling Decision Tables to the user
   17.6 Decision Trees
   17.7 A procedural note
   17.8 Questions and answers

PART 5: SYSTEM MODELING

18. Use of System Models
   18.1 Logical and physical DFD characteristics
   18.2 Charter for Change
   18.3 Deriving the Target Document

   19.1 Use of expanded Data Flow Diagrams
   19.2 Deriving logical file equivalents
   19.3 Brute-force logical replacement
   19.4 Logical DFD walkthroughs

20. Building a Logical Model of a Future System
   20.1 The Domain of Change
   20.2 Partitioning the Domain of Change
   20.3 Testing the new logical specification

21. Physical Models
   21.1 Establishing options
   21.2 Adding configuration-dependent features
   21.3 Selecting an option

22. Packaging the Structured Specification
   22.1 Filling in deferred details
   22.2 Presentation of key interfaces
   22.3 A guide to the Structured Specification
   22.4 Supplementary and supporting material
