Chapter 2 — Error Correction and Registration of Image Data

2.1 Sources of Radiometric Distortion ........................................ 39
2.1.1 The Effect of the Atmosphere on Radiation ......................... 39
2.1.2 Atmospheric Effects on Remote Sensing Imagery .................... 43
2.1.3 Instrumentation Errors .................................................... 43
2.2 Correction of Radiometric Distortion ...................................... 44
2.2.1 Detailed Correction of Atmospheric Effects ......................... 44
2.2.2 Bulk Correction of Atmospheric Effects ............................... 46
2.2.3 Correction of Instrumentation Errors ................................... 47
2.3 Sources of Geometric Distortion ............................................ 48
2.3.1 Earth Rotation Effects .................................................... 49
2.3.2 Panoramic Distortion ...................................................... 51
2.3.3 Earth Curvature ............................................................ 53
2.3.4 Scan Time Skew ............................................................ 54
2.3.5 Variations in Platform Altitude, Velocity and Attitude .............. 54
2.3.6 Aspect Ratio Distortion ..................................................... 55
2.3.7 Sensor Scan Nonlinearities ............................................... 55
2.4 Correction of Geometric Distortion ........................................ 56
2.4.1 Use of Mapping Polynomials for Image Correction ................. 56
2.4.1.1 Mapping Polynomials and Ground Control Points ............... 57
2.4.1.2 Resampling .............................................................. 58
2.4.1.3 Interpolation ............................................................. 58
2.4.1.4 Choice of Control Points ............................................. 60
2.4.1.5 Example of Registration to a Map Grid ............................ 61
2.4.2 Mathematical Modelling .................................................... 64
2.4.2.1 Aspect Ratio Correction ............................................. 64
2.4.2.2 Earth Rotation Skew Correction .................................... 64
2.4.2.3 Image Orientation to North-South .................................. 65
2.4.2.4 Correction of Panoramic Effects ................................... 65
2.4.2.5 Combining the Corrections .......................................... 65
2.5 Image Registration ............................................................ 66

Chapter 8 — Supervised Classification Techniques

Part I. Standard Classification Algorithms

8.1 Steps in Supervised Classification
8.2 Maximum Likelihood Classification
8.2.1 Bayes' Classification
8.2.2 The Maximum Likelihood Decision Rule
8.2.3 Multivariate Normal Class Models
8.2.4 Decision Surfaces
8.2.5 Thresholds
8.2.6 Number of Training Pixels Required for Each Class
8.2.7 A Simple Illustration
8.3 Minimum Distance Classification
8.3.1 The Case of Limited Training Data
8.3.2 The Discriminant Function
8.3.3 Degeneration of Maximum Likelihood to Minimum Distance Classification
8.3.4 Decision Surfaces
8.3.5 Thresholds
8.4 Parallelepiped Classification
8.5 Classification Time Comparison of the Classifiers
8.6 The Mahalanobis Classifier
8.7 Table Look Up Classification

Part II. More Advanced Considerations

8.8 Context Classification
8.8.1 The Concept of Spatial Context
8.8.2 Context Classification by Image Pre-Processing
8.8.3 Post Classification Filtering
8.8.4 Probabilistic Label Relaxation
8.8.4.1 The Basic Algorithm
8.8.4.2 The Neighbourhood Function
8.8.4.3 Determining the Compatibility Coefficients
8.8.4.4 The Final Step — Stopping the Process
8.8.4.5 Examples
8.9 Classification of Mixed Image Data
8.9.1 The Stacked Vector Approach
8.9.2 Statistical Methods
8.9.3 The Theory of Evidence
8.9.3.1 The Concept of Evidential Mass
8.9.3.2 Combining Evidence — the Orthogonal Sum
Chapter 10 — Feature Reduction

10.1 Feature Reduction and Separability .................................................. 245
10.2 Separability Measures for Multivariate Normal Spectral Class Models .................................................. 245
  10.2.1 Distribution Overlaps ................................................................. 245
  10.2.2 Divergence ............................................................................. 246
  10.2.2.1 A General Expression ......................................................... 246
  10.2.2.2 Divergence of a Pair of Normal Distributions ..................... 248
  10.2.2.3 Use of Divergence for Feature Selection .............................. 248
  10.2.2.4 A Problem with Divergence .............................................. 249
  10.2.3 The Jeffries-Matusita (JM) Distance ....................................... 250
    10.2.3.1 Definition ........................................................................ 250
    10.2.3.2 Comparison of Divergence and JM Distance ................. 251
  10.2.4 Transformed Divergence .......................................................... 251
    10.2.4.1 Definition ........................................................................ 251
    10.2.4.2 Relation between Transformed Divergence and Probability of Correct Classification .......... 252
    10.2.4.3 Use of Transformed Divergence in Clustering .................. 253
  10.3 Separability Measures for Minimum Distance Classification ..... 253
  10.4 Feature Reduction by Data Transformation ................................ 253
    10.4.1 Feature Reduction Using the Principal Components Transformation ........................................... 253
    10.4.2 Canonical Analysis as a Feature Selection Procedure .......... 255
    10.4.2.1 Within Class and Among Class Covariance Matrices .......... 256
    10.4.2.2 A Separability Measure ................................................... 257
    10.4.2.3 The Generalised Eigenvalue Equation ............................. 258
    10.4.2.4 An Example ................................................................... 259
    10.4.3 Arithmetic Transformations ................................................... 261
References for Chapter 10 ................................................................. 262
Problems ......................................................................................... 262

Chapter 11 — Image Classification Methodologies .................................. 265

11.1 Introduction .................................................................................. 265
11.2 Supervised Classification .............................................................. 265
  11.2.1 Outline ................................................................................. 265
  11.2.2 Determination of Training Data ........................................... 266
  11.2.3 Feature Selection ................................................................. 266
  11.2.4 Detecting Multimodal Distributions ...................................... 267
  11.2.5 Presentation of Results ......................................................... 267
  11.2.6 Effect of Resampling on Classification ................................ 268
  11.3 Unsupervised Classification ........................................................ 268
    11.3.1 Outline, and Comparison with Supervised Methods .......... 268
