PROLOGUE

	The forest	1
	The reef	2
	The plum	3
•	The albatross	5
	The problem	5
	•	
	PART I: THE ELEMENTS OF EVOLUTIONARY EXPLANATION	
1	Evolutionary explanation	9
	Chapter overview	9
	Introduction	9
	Context	9
	Life history traits	10
	An explanatory framework	11
	Chapter previews for Part I	13
	Natural selection and fitness	14
	Adaptation and constraint	16
	Recommended reading	18
2	Demography: age and stage structure	20
_	Chapter overview	20
	Introduction	20
	Life tables	21
	The Euler-Lotka equation	23
	Calculating r	25
	The stable age distribution	25
	Generation time	26
	Rates of increase	26
	Reproductive value	26
	Residual reproductive value and the costs of reproduction	28
	Age and stage distributions	29
	Fitness measures	31
	Comment on fitness	33
	Sensitivity and elasticity	33
	Situational sensitivity	34
	Summary of introductory demography	35
	Recommended reading	36
	Problems	37
	Appendix: a Pascal program to calculate r	38

CONTENTS

х

3	Quantitative genetics and reaction norms	39
	Chapter overview	39
	Introduction	40
	The basic model	41
	Heritabilities of life history traits	48
	Selection on quantitative traits	49
	How is genetic variation for life history traits maintained?	51
	Genetic covariance	53
	Maximum likelihood estimates	55
	Measurements of genetic covariances for life history traits	55
	Quantitative genetics in heterogeneous environments	60
	The heritability of phenotypic plasticity	61
	Other ways to quantify plasticity	63
	The integration of the plastic response	65
	Connecting quantitative genetics to demography	65
	Closing comment	68
	Chapter summary	69
	Recommended reading	69
	Problems	70
1	Trodo ago	. 70
4	Trade-offs	72
	Chapter overview	72
	Introduction	72
	Physiological trade-offs	75
	Microevolutionary trade-offs: intra-individual and intergenerational	79
	Why might we observe the 'wrong' trade-off?	80
	Current reproduction vs. survival	82
	Current vs. future reproduction	84
	Reproduction vs. growth	85
•	Current reproduction vs. condition	86
	Number vs. size of offspring	86
	Discussion	88
	Chapter summary	89
	Recommended reading	89
	Problems .	. 89
5	Lineage-specific effects	91
	Chapter overview	91
	Introduction	91
	Examples of lineage-specific effects	92
	What a lineage is and how to define it	94
	Applications of cladistics to ecology	95
	Statistical approaches to the comparative method	. 99
	The origin of phylogenetic effects	108
•	Discussion: can comparative results demonstrate adaptation?	111
	Chapter summary	113
	Recommended reading	113
	Problems	114

CONTENTS	V1
CONTENIS	A1

D	iscussion of Part I	115
	Discussion overview	115
	Constraints	115
	The rate of evolution of life history traits	115
	The interpretation of optimality models	118
	Problems	119
	PART II: THE EVOLUTION OF THE MAJOR LIFE HISTORY TRAITS	
6	Age and size at maturity	123
U	Chapter overview	123
	Introduction	123
	Patterns of maturation	125
	Optimality models of age and size at maturity	123
	Predicting optimal age and size at maturity: maximizing r	133
	Extending the model from population means to reaction norms	136
	Predicting optimal age and size at maturity: maximizing expected number	130
	of offspring	145
	Discussion	148
	Chapter summary	149
	Problems	149
7	Number and size of offspring	150
	Chapter overview	150
	Introduction	151
	Background: the natural history of clutch and offspring size	153
	Effects causing deviations from the Lack clutch	155
	Size of offspring	174
	. Chapter summary	178
	Recommended reading	179
	Problems	179
	•	
8	Reproductive lifespan and ageing	180
•	Chapter overview	180
	Introduction	181
	A phylogenetic perspective on lifespan	183
	Selection for longer reproductive lifespan 1: mean mortality rates	186
	Selection for longer reproductive lifespan 2: variation in mortality rates	193
	Intrinsic effects limiting the lifespan of the disposable soma: ageing	199
	Chapter summary	205
	Recommended reading	205
	Problem	205

CONTENTS

xii

D	Discussion of Part II	206
	Life history strategies	206
	Are any general models useful?	208
	Are there any genetic constraints at all?	208
	Extensions of life history theory	209
,	Potential applications of life history theory	210
	Paradoxes	211
	Problems	211
A	ppendices	
1	Genetic correlations of life history traits	212
2	Evidence on trade-offs	214
3	Elementary allometry	219
