Language as a Cognitive Process

Volume I: Syntax

Terry Winograd
Stanford University
Contents

Preface ................................................................. vii
Acknowledgments ..................................................... x

Chapter 1. Viewing Language as a Knowledge-based Process .... 1
   1.1 What every language user knows ............................... 2
   1.2 The evolution of linguistic science ............................. 6
   1.3 The computational paradigm .................................... 13
   1.4 Practical relevance ............................................. 22
      Further Readings .................................................. 30
      Exercises .......................................................... 32

Chapter 2. Word Patterns and Word Classes ....................... 35
   2.1 Patterns and matching .......................................... 36
   2.2 Word classes .................................................... 46
   2.3 Transition networks ............................................. 54
   2.4 Deterministic recognition with transition networks ........ 60
      Further Readings .................................................. 67
      Exercises .......................................................... 67

Chapter 3. Context-free Grammars and Parsing ................. 72
   3.1 Three approaches to structure ................................ 73
   3.2 Rules and derivations .......................................... 82
   3.3 Parsing with context-free grammars ........................... 87
   3.4 A sampler of recognition procedures ........................ 93
   3.5 Refinements to the basic recognition procedures .......... 108
   3.6 Charts and the active chart parser ........................... 116
      Further Readings .................................................. 127
      Exercises .......................................................... 128
Chapter 4. Transformational Grammar

4.1 The inadequacies of phrase structure grammars
4.2 Generalized rewrite rules
4.3 The basic transformational model
4.4 Refinements in the standard theory
4.5 Criteria considered in developing syntactic theories
4.6 Computational implications of transformational grammar

Further Readings
Exercises

Chapter 5. Augmented Transition Network Grammars

5.1 Recursive transition networks
5.2 Augmenting the network
5.3 The use of registers in ATN grammars
5.4 The ordering of actions and conditions
5.5 Non-local context and hold registers
5.6 Further syntactic issues
5.7 Implementation of ATN parsers

Further Readings
Exercises

Chapter 6. Feature and Function Grammars

6.1 The goals of systemic grammar
6.2 Functions and systems
6.3 Choice systems
6.4 Realization
6.5 Case grammar
6.6 Functional grammars
6.7 Generalized phrase structure grammars

Further Readings
Exercises

Chapter 7. Computer Systems for Natural Language Parsing

7.1 Issues in the design of a parsing system
7.2 Augmented phrase structure grammar systems
7.3 Systems based on transformational grammars
7.4 Chart rewrite systems
7.5 ATN-based systems
7.6 Pattern matching systems
7.7 Situation-action parsers

Further Readings
Exercises
Appendix A. A Language for Describing
Objects and Procedures ........................................ 415
A.1 Programming and description ............................... 417
A.2 Classes and objects .......................................... 419
A.3 Descriptions of procedures ................................. 428
A.4 A specification of the language constructs .............. 442
A.5 Standard definitions ......................................... 454

Appendix B. An Outline of English Syntax .................. 465
B.1 The clause ................................................... 469
B.2 The noun group ............................................. 511
B.3 Other groups and specialized structures ................. 521
B.4 Word classes ............................................... 531

Index of syntactic terms ........................................ 551

Appendix C. Current Directions in Transformational
Grammar .......................................................... 555
C.1 Reorganization of the model ............................... 558
C.2 Constraints on rule operation ............................. 567
C.3 New kinds of structures .................................... 572
C.4 New kinds of rules ......................................... 578

Appendix D. An ATN Grammar for English ................. 583
D.1 Formal definitions for ATN structures and processes ... 585
D.2 An ATN grammar ........................................... 595

Bibliography ...................................................... 601
Author index ..................................................... 617
Topic index ....................................................... 621
